SaveAir

What is the **SaveAir**?

An independent diaphragm regulator that supplies a constant and exact outlet pressure regardless of input pressure fluctuations. Can be installed in any compressed air system.

The SaveAir prevents dynamic pressure waste that arises when the pressure and flow (at the process point) are unnecessarily higher than those specified by the original manufacturer to achieve the desired function.

SaveAir Benefits

- Supplies compressed air systems with pre-set pressure. No gauge needed.
- Prevents compressed air waste (also known as dynamic pressure waste). Saves energy.
- Reliable, small and compact design that is easy to install and affordable to purchase.
- Locked to prevent pressure changes. Increases device service life. Tamper proof.

Applications

- Pneumatic supply lines
- Pump, flow stabilization
- Automotive
- Workshop equipment
- Pneumatic power tools
- Many other pneumatic applications

Installation

The regulator ensures that a constant pressure is always maintained, despite the normal pressure fluctuations in a system. To avoid unnecessary loss of pressure in long pipes or hoses, the regulator has to be mounted as close as possible to the point of consumption.
